SUMMARY

Multiplayer Gameplay Programmer with 5 years of experience building games in Unity and Unreal Engine 5. Currently leading the multiplayer department on an unreleased competitive PC racing and combat game, owning the full online stack: server-authoritative gameplay with Photon Fusion, client-side prediction and lag compensation, dedicated servers and matchmaking on PlayFab, and Steam integration. Experienced in leading small teams and shipping mobile titles with 100K+ downloads.

EXPERIENCE

Lead Multiplayer Programmer — HYS Games, Riyadh, Saudi Arabia (Remote) **Jul 2025 – Present**

- Lead the multiplayer department (team of 2), responsible for all networking architecture and delivery on an unreleased competitive PC racing and combat game with 2–8 players per match.
- Converted the entire game to online multiplayer with **Photon Fusion**, including vehicle control, abilities, weapons, collisions and matchmaking.
- Built a **server-authoritative** model at a **60+ Hz tick rate**, using **client-side prediction** and **lag compensation** to keep gameplay responsive with no visible input delay.
- Deployed dedicated game servers on **PlayFab Multiplayer Servers** and implemented PlayFab matchmaking and cloud player-data saving.
- Integrated the **Steamworks SDK** for Steam parties, friend invites and playing together in groups.

Game Developer — Dakkaken, Cairo, Egypt **Oct 2023 – Jun 2025**

- Led a team of 3–4 developers building the games for **Atfaluna**, a children's edutainment app released on Android and iOS with **100K+ downloads** on Google Play.
- Designed gameplay, mechanics and environments for educational mini-games and coordinated asset integration with the art team.
- Built and deployed Android and iOS releases; worked with project managers to set milestones and resolve blockers.

Gameplay Programmer — Game Hermits, Mansoura, Egypt **Nov 2022 – Oct 2023 (Intern: Feb 2022 – Jun 2022)**

- **Zamakan** (UE5, C++): built procedural generation, player controllers, pickup and obstacle systems, player save system, VFX and UI; co-developed the rounds system.
- **Illusion** (UE5): first-person story horror game; implemented object and door interaction, car driving, the dialogue-tree system and player UI.
- Online games in Unity and C#: **Challenge & Win** (turn-based word game), **Glory Kings** (multiplayer idle game) and **Psycho X Prey** (PvP: networking and mechanics).
- VR simulations for Meta Quest 2 (**Oil Check**, **MTEX**, **Oil Refinery**): XR Input interaction, project and environment setup, VFX.

PROJECTS

PingGo — Co-founder **Present**

- Co-founding a competitive matchmaking platform for real-life table tennis players, with an AI-based virtual referee; applying game design and gamification to real-world competition.

SKILLS

- **Networking:** Photon Fusion (dedicated server), server-authoritative architecture, client-side prediction, lag compensation, matchmaking, PlayFab (Multiplayer Servers, Matchmaking, Player Data), Steamworks SDK, Mirror, Unity Netcode for GameObjects
- **Engines and languages:** Unity, Unreal Engine 4/5, C#, C++, Blueprints
- **Platforms:** PC (Steam), Android, iOS, Meta Quest (VR)
- **Tools and practices:** Git, GitHub, team leadership, milestone planning, cross-discipline collaboration

LANGUAGES

Arabic: Native · **English:** B2 (professional working proficiency) · **German:** A2 · **Spanish:** A1 (studying 1–2 hours daily)

EDUCATION

B.Sc. Computer and Information Sciences — Mansoura University, Egypt **2018 – 2022**
Graduation project: Intra Nabulas (game), grade: Excellent
